

KS2 Life Cycles

Session Description

Pupils will discover the life cycles of mammals, amphibians, insects and birds.

We refer to examples from Marwell's animal collection to demonstrate different life cycle stages. Pupils also meet some live animals to see what stage of their life cycle they are in.

This interesting 40 minute session includes group work and a variety of props.

Learning Objective

To be able to describe differences in the life cycles of a mammal, an amphibian, an insect and a bird.

National Curriculum Links

SCIENCE

Year 5 Living things and their habitats

- describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird

Year 5 Animals, including humans

- describe the changes as humans develop to old age.
